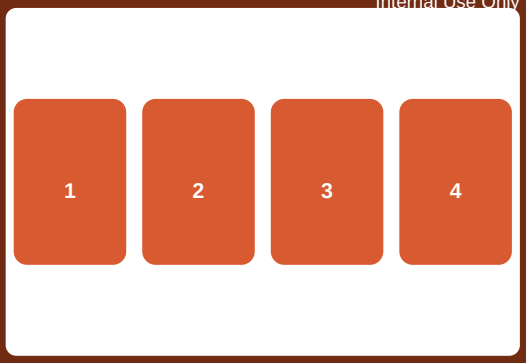
PEOPLE & CI

Internal Use Only

Design Thinking

A human-centred innovation process using empathy, ideation, and rapid prototyping to generate creative solutions to



WHEN TO USE

For customer experience challenges, new service design, product innovation, or any problem where the solution space is genuinely unknown.

HOW TO APPLY — STEPS

1. Empathise — deeply understand the user through observation and open interviews
2. Define — synthesise findings into a clear, specific 'How Might We' problem statement
3. Ideate — generate a wide range of ideas without judgment or filtering
4. Prototype — build rough, fast, cheap representations of the top two or three ideas
5. Test — get real user feedback on prototypes and iterate based on what you learn

PRACTITIONER TIP

! The prototype does not need to work — it needs to teach. The goal is fast learning, not a finished solution on the first attempt.

KEY OUTPUTS

- Empathy map and user journey
- Problem statement (How Might We)
- Prototype or mock-up
- User test insights and iteration plan

HOW TO MEASURE SUCCESS

Number of user tests completed per idea; insights per test session; adoption rate of final solution at 6 months
