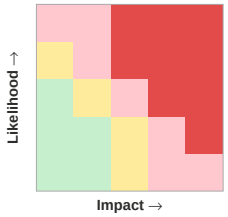
Internal Use Only

Risk Management

Identify, assess, prioritise, and control risks to prevent losses and protect business continuity — across all departments and



WHEN TO USE

Before major changes, projects, or investments; on a continuous basis for operational, financial, strategic, and safety risks.

HOW TO APPLY — STEPS

1. Identify risks through structured brainstorming, FMEA, historical analysis, and expert input
2. Assess each risk on likelihood and impact using a consistent risk matrix
3. Assign a named risk owner for every risk identified
4. Define control measures and mitigation actions for all high and critical risks
5. Review and update the risk register at least quarterly or after any significant change

PRACTITIONER TIP

! The biggest risks are often the ones everyone assumes 'will never happen here'. Specifically challenge those assumptions first.

KEY OUTPUTS

- Risk register with likelihood/impact scores
- Risk matrix heat map
- Mitigation action plan with owners
- Residual risk summary after controls

HOW TO MEASURE SUCCESS

Number of risks identified and effectively controlled; incidents arising from uncontrolled risks; register update frequency
