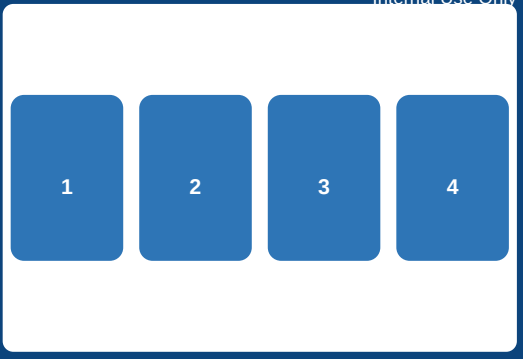
Internal Use Only

Work Instructions Guidelines

Provide a framework for writing work instructions that are clear, visual, concise, and actually used by operators at the



WHEN TO USE

When creating or revising any written procedure, work instruction, or operating standard.

HOW TO APPLY — STEPS

1. Write the instruction WITH the people who perform the task — not about them
2. Use photographs, diagrams, and numbered steps — minimise text where possible
3. Limit to one page where possible; two pages maximum for complex tasks
4. Test with an inexperienced operator: if they can follow it alone, it is good enough
5. Post at the point of use where it is visible during work — not in a folder

PRACTITIONER TIP

! If explaining a single step requires a paragraph, that step is too complex and needs to be broken down further.

KEY OUTPUTS

- One or two page visual work instruction
- Photo-based standard at point of use
- Validation result from test with new operator

HOW TO MEASURE SUCCESS

Work instruction adherence rate %; errors per instruction cycle; proportion of instructions that are one page
